

*Robot Upgrade &
Re-Manufacturing Specialists*

**Automation
Services Inc.**

**Servo Motor
Conversions**
2 Year Warranty

www.centerlineautomation.com

Increased Flexibility

Add servo to ANY or ALL axes for the most flexible motion control. Program multiple drop positions, placement to stacks or pick up inserts and in-mold labels.

Improved Reliability

Servo conversions use new servo motors, drives and gearboxes and come with a 2 year warranty. Existing mounting hardware is inspected for wear and repaired or new hardware is manufactured.

Cost Savings

Servo conversions can be done to your existing equipment for cost savings greater than 50% compared to new equipment with similar specifications.

Faster Speeds, Faster Cycles

Combined with our *Controls Upgrade* the servo conversion package increases performance through faster takeouts and simultaneous motions on all axes.

Installation & Service

Our service technicians will re-install your robot and train your personnel on its new features and controls.

Why Upgrade to Servo?

As molds become more complex and required cycle times become shorter on even the largest presses, every second counts. Servo motors provide the best speed, accuracy, and flexibility.
